

S-25 March, 2013 AC after Circulars from Circular No.153 & onwards

- 66 -

DR. BABASAHEB AMBEDKAR MARATHWADA UNIVERSITY**CIRCULAR NO. ACAD/NP/M.E./Syllabi/189/2013**

It is hereby informed to all concerned that, on recommendations of the Faculty of Engineering and Technology, the Hon'ble Vice-Chancellor has accepted the following **"Revised Syllabi with Cumulative Grade Point Average [CGPA]"** under the Faculty of Engineering & Technology on behalf of the **Academic Council Under Section-14(7) of the Maharashtra Universities Act, 1994** as appended herewith :-

Sr. No.	Revised Syllabi
[1]	Revised Syllabus of M.E. [Computer Networking Engg.],
[2]	Revised Syllabus of M.E. [Structural Engineering],
[3]	Revised Syllabus of M.E. [Water Resources Engineering],
[4]	Revised Syllabus of M.E. [Environmental Engineering],
[5]	Revised Syllabus of M.E. [Software Engineering],
[6]	Revised Syllabus of M.E. [Computer Science],
[7]	Revised Syllabus of M.E. [Control System Engineering],
[8]	Revised Syllabus of M.E. [Heat Power],
[9]	Revised Syllabus of M.E. [Manufacturing Engineering],
[10]	Revised Syllabus of M.E. [Electronics],
[11]	Revised Syllabus of M.E. [Electronics & Telecommunication],
[12]	Revised Syllabus of M.E. [Embedded System],
[13]	Revised Syllabus of M.E. [Communication Engineering],
[14]	Revised Syllabus of M.E. [Digital Communication],
[15]	Revised Syllabus of M.E. [Biotechnology],
[16]	Revised Syllabus of M.E. [CAD/CAM],
[17]	Revised Syllabus of M.E. [Thermal],
[18]	Revised Syllabus of M.E. [Design Engineering],

This is effective from the Academic Year 2013-2014 and onwards.

All concerned are requested to note the contents of this circular and bring the notice to the students, teachers and staff for their information and necessary action.

University Campus,
Aurangabad-431 004.
REF.NO. ACAD/ NP/ M.E./
SYLLABI / 2013/14092-100
V.C.14[7] A-08.
Date:- 15-06-2013.

:: 2 ::

Copy forwarded with compliments to :-

- 1] The Principals, affiliated concerned Colleges,
Dr. Babasaheb Ambedkar Marathwada University.
- 2] The Director, University Network & Information Centre, UNIC, with
a request to upload the above all syllabi on University Website
[www.bamu.net].

Copy to :-

- 1] The Controller of Examinations,
- 2] The Superintendent, [Engineering Unit],
- 3] The Programmer [Computer Unit-1] Examinations,
- 4] The Programmer [Computer Unit-2] Examinations,
- 5] The Superintendent, [Eligibility Unit],
- 6] The Director, [E-Suvidha Kendra], in-front of Registrar's Quarter,
Dr. Babasaheb Ambedkar Marathwada University,
- 7] The Record Keeper,
Dr. Babasaheb Ambedkar Marathwada University.

University, Aurangabad**

**Syllabus of
M. E. (Manufacturing Engineering)**

[Effective from Academic Year 2013 - 2014]

Dr. Babasaheb Ambedkar Marathwada University Aurangabad.

Faculty of Engineering & Technology

Rules and Regulations for M.E. & M.Tech. Courses

➤ **What is a credit system**

A credit system is a systematic way of describing an educational program by attaching credits to its components. The definition of credits in higher education systems may be based on different parameters, such as student workload, learning outcomes and contact hours.

➤ **Advantages of the Credit System**

- Represents a much-required shift in focus from teacher-centric to learner-centric education since the work load estimated is based on the investment of time in learning, not in teaching.
- Helps to record course work and to document learner work load realistically since all activities are taken into account-not only the time learners spend in lectures or seminars but also the time they need for individual learning and the preparation of examinations etc.
- Segments learning experience into calibrated units, which can be accumulated in order to gain an academic award.
- Helps self-paced learning. Learners may undertake as many credits as they can cope with without having to repeat all the courses in a given semester if they fail in one or more courses. Alternatively, they can choose other courses and continue their studies.

➤ **What is Grading?**

The word Grade derived from the Latin word gradus, meaning, step. Grading, in the educational context is a method of reporting the result of a learner's performance subsequent to his evaluation. It involves a set of alphabets which are clearly defined and designated and uniformly understood by all the stake holders. A properly introduced grading system not only provides for a comparison of the learner's performance but it

also indicate the quality of performance with respect to the amount of efforts put in and the amount of knowledge acquired at the end of the courses by the learners.

➤ **CURRICULUM:**

1.1 Curriculum:

Every program with specialization has a prescribed course structure which in general terms is known as Curriculum. It prescribes course to be studied in each semester; the relevant information containing course structure along with detail syllabus for each course of each program is updated periodically and is uploaded on the website.

1.2 Semesters:

The Faculty of Engineering & Technology implements a credit based curriculum and grade based evolution system for P.G. program is of four semesters. The academic courses are delivered in the first two semesters. Dissertation work is carried out by a student in the third and fourth semester. The first semester begins in the last week of July ends by the last week of November while the second semester begins in the first week of January and ends by the second week of May. Total duration for each semester is generally of 20 weeks including the period of examination, evaluation and grade declaration.

1.3 Course Credit:

Education is organized around the semester-based credit system of study. The prominent features of the credit system are a process of continuous evaluation of a student's performance/progress and flexibility to allow a student to progress at an optimum pace suited to his/her ability or convenience, subject to fulfilling minimum requirements for continuation.

A student's performance/progress is measured by the number of credits that he/she has earned, i.e. completed satisfactorily. Based on the course credits and grades obtained by the student, grade point average is calculated. A minimum grade point average is required to be maintained for satisfactory progress and continuation in the program. Also a minimum number of earned credits and a minimum grade point average should be acquired in order to qualify for the degree. All programmers are defined by the total credit requirement and a pattern of credit distribution over courses of different categories.

1.4 Course credits assignment

Each courses, except a few special courses, has a certain number of credits assigned to it depending upon its lecture, tutorial and laboratory contact hours in a week. This weightage is also indicative of the academic expectation that includes in-class contact and self-study outside of class hours.

Lectures and Tutorials: One lecture or tutorial hour per week per semester is assigned one credit.

Practical/Laboratory: One laboratory hour per week per semester is assigned one credit.

Example: Course: XYZ Engg: 4 credits (3-1-2)

The credits indicated for this course are computed as follows:

3 hours/week lectures = 3 credits

1 hours/week tutorial = 1 credit

2 hours/week practical = $2 \times 0.5 = 1$ credit

2 hours/week seminar = $2 \times 0.5 = 1$ credit

Dissertation seminar = $2 \times 1 = 2$ credit

(3-1-2) 3 credit course = (3 h Lectures + 1 h Tutorial + 2 h Practical) per week
= 6 Contact hours per week

1.5 Earning Credits

At the end of every course, a letter grade is awarded in each course for which a student had registered. On obtaining a pass grade, the student accumulates the course credits as earned credits. A student's performance is measured by the number of credits that he/she has earned and by the weighted grade point average.

The credit system enables continuous evaluation of a student's performance, and allows the students to progress at an optimum pace suited to individual ability and convenience, subject to fulfilling minimum requirement for continuation.

1.6 Evaluation System

1. Semester Grade Point Average (SGPA) =

$$\frac{\text{SUM (course credits in passed courses X earned grade points)}}{\text{SUM (Course credits in registered courses)}}$$

2. Cumulative Grade Point Average (CGPA) =

$$\frac{\text{SUM (course credits in passed courses X earned grade points) of all Semester}}{\text{SUM (Course credits in registered courses) of all Semester}}$$

3. At the end of M.E & M. Tech Program, student will be placed in any one of the divisions as detailed below. (According to AICTE Handbooks)

Ist Division with distinction : CGPA \geq 8.25 and aboveIst Division : CGPA \geq 6.75 and $<$ 8.25IInd Division : CGPA \geq 6.75 and $<$ 6.25

As per AICTE Handbook (2013-14), new gradation suggested as follows,

Table 1

Grade Point	Equivalent Range
6.25	55%
6.75	60%
7.25	65%
7.75	70%
8.25	75%

Conversion of CGPA to percentage marks for CGPA \geq 5.0 can be obtained using equations.

$$\text{Percentage marks} = (\text{CGPA} \times 10) - 7.5$$

An example of these calculations is given below:

Typically one example for academic performance calculations of semester -I

Table 2

Course No. (1)	Course Credit (2)	Grade Awards (3)	Earned Credit (4)	Grade Points (5)	Points Secured (6)=(4) x (5)
Subject 1	4	B	4	6	24
Subject 2	4	C	4	5	20
Subject 3	4	O	4	10	40
Subject 4	4	A+	4	8	32
Subject 5	4	C	4	5	20
Seminar	2	A++	2	9	18
Total	22		22	38	134

$$1. \text{ Semester Grade Point Average (SGPA)} = \frac{(134)}{(22)} = 6.09$$

$$2. \text{ Cumulative Grade Point Average (CGPA)} = \frac{\text{Cumulative points earned in all passed courses} = 134 \text{ (past semester)} + 134 \text{ (this sem.)} = 268}{\text{Cumulative earned credits} = 22 \text{ (past semesters)} + 22 \text{ (this sem)} = 44}$$

$$\frac{\sum (134 + 134)}{\sum (22 + 22)} = 6.09$$

System Evaluation Table

Table 3

Grade	Grade Points	Marks Obtained (%)			Description Performance
		Regular Semester	Re-Examination	Summer Semester Examination/Re-appear	
O	10	91-100	--	--	Outstanding
A++	09	86-90	91-100	91-100	Excellent
A+	08	76-85	86-90	81-90	Very Good
A	07	66-75	76-85	71-80	Good
B	06	56-65	66-75	61-70	Fair
C	05	46-55	56-65	51-60	Average
D	04	40-45	40-55	40-50	Poor
F	00	Below 40	Below 40	Below 40	Fail
EE					Incomplete
WW					Withdrawal
XX	--	--	--	--	Detained
ABSENT	--	--	--	--	Absent
PP	--	--	--	--	Passed (Audit Course)
NP	--	--	--	--	Not Passed (Audit Course)

Grade Awards:

- i) A ten point rating scale shall be used for the evaluation of the performance of the student to provide letter grade for each course and overall grade for the Master's Programme. Grade points are based on the total number of marks obtained by him/her in all the heads of examination of the course. These grade points and their equivalent range of marks are shown separately in Table-4.

Table 4: Ten point grades and grade description

Sr.No.	Equivalent Percentage	Grade Points	Grade	Grade Description
1	90.00 – 100	10	O	Outstanding
2	80.00 – 89.99	9	A++	Excellent
3	70.00 – 79.99	8	A+	Exceptional
4	60.00 – 69.99	7	A	Very Good
5	55.00 – 59.99	6	B+	Good
6	50.00 – 54.99	5.5	B	Fair
7	45.00 – 49.99	5	C+	Average
8	40.01 – 44.99	4.5	C	Below Average
9	40	4.00	D	Pass
10	<40	0.00	F	Fail

- ii) Non appearance in any examination/assessment shall be treated as the student have secured zero mark in that subject examination/assessment.
- iii) Minimum D grade (4.00 grade points) shall be the limit to clear/pass the course/subject. A student with F grade will be considered as 'failed' in the concerned course and he/she has to clear the course by reappearing in the next successive semester examinations. There will be no revaluation or recounting under this system.
- iv) Every student shall be awarded Grade points out of maximum 10 points in each subject (based on 10 Point Scale). Based on the Grade points obtained in each subject, Semester Grade Point Average (SGPA) and then Cumulative Grade Point Average (CGPA) shall be computed. Results will be announced at the end of each semester and cumulative Grade card with CGPA will be given on completion of the course.

Proposed Coding System of M.E/M.Tech Subjects

Six Digit Code for a subject (PG Course)

	Digits →	1 2 3	4	5 6
Sr. No.	Branch ↓	Branch code	Year	Subject
1	Electronics	MEX	PG I year – 6	Semester –I/III
2	Communication Engineering	MEC	PG II Year - 7	1-20 Theory
3	Electronics & Telecom.	MET		21-30 Practical
4	Digital Communications	MDC		31 Dissertation-I
5	Embedded System	MES		41-49 Electives
6	Structure Engineering	MSE		Semester –II/IV
7	Environmental Engineering	MEV		51-70 Theory
8	Water Resource Engineering	MWR		71-80 Practical
9	Computer Engineering	MCE		81 Dissertation-II
10	Computer Network	MCN		91-99 Electives
11	Software Engineering	MSW		
12	Mechanical Engineering	MME		
13	Thermal Engineering	MTE		
14	CAD/CAM	MCC		
15	Manufacturing	MMF		
16	Heat Power	MHP		
17	Machine Design	MMD		
18	M.Tech Mechanical	MTM		
19	CSE & IT	MCI		
20	Manufacturing Processing Engineering	MMP		

Note: - Kindly, Allot Same Code for same Electives/ subjects for different branches to avoid repetitions of Question papers/settings/assessments.

DEGREE OF MASTER OF ENGINEERING
(Course with effective from academic year: 2013-2014)

I	1	The examination for the Degree of Master of Engineering will be held in four semesters, M.E. Semester-I, M.E. Semester-II, M.E. Semester-III, and M.E. Semester-IV in case of full time course.
Rules & Eligibility		
II	1	Rule for admission to P.G. Degree course in Engineering and Technology as per rules and regulation of AICTE/DTE & Dr. Babasaheb Ambedkar Marathwada University, Aurangabad.
Evaluation method		
III	1	Each theory course will be of 100 marks and be divided in to internal examination of 20 marks and semester examination of 80 marks (20+80=100 marks). Each practical course will be of 50 marks
	2	There shall be two class tests within a semester. First based on 40% syllabus taught and second based on 60% syllabus taught. The setting of question paper and assessment will be done by the concerned teacher who has taught the syllabus. Average marks obtained out of two examinations will be considered for the preparation of final sectional marks/ grade.
	3	The Question papers in theory subjects shall be set by the Examiners appointed for the purpose by the University on the recommendations of the Board of studies of the concerned PG Course.
	4	The assessment of the term work for any subject will be done by recognized post-graduate teacher.
	5	To pass the examination a candidate must obtain a minimum CGPA of 6.25 (CGPA to the scale of 10).
	6	Candidate who secures $CGPA \geq 6.25$ and $CGPA < 6.75$ declared to have passed examination in second class.
	7	Candidate who secures $CGPA \geq 6.75$ and $CGPA < 8.25$ declared to have passed examination in first class.
	8	Candidate who secures $CGPA \geq 8.25$ declared to have passed examination in first class with distinction.

IV	1	In case candidate fails to get D grade in one or more heads of passing examination, he will be allowed at his option, to reappear for only those heads of passing in which he has failed or got less than D grade at subsequent examinations.
	2	The grades obtained by the candidate in any head of passing at the examination will be carried forward unless the candidates reappear for the head of passing in accordance with ref. IV (1)
	3	In case the candidate passes in all heads of passing under M.E. Semester-I, M.E. Semester-II examination and obtained a minimum CGPA of 6.25 in M.E. Semester-I, M.E. Semester-II taken together as required under ref. II(2) above, he will not be allowed to reappear for any head of passing under M.E. Semester-I, M.E. Semester-II in accordance with ref. IV(1)
	4	A candidate will not be allowed to appear for M.E. Semester-III examination unless he passes in all heads of passing under M.E. Semester-I, M.E. Semester-II examination and obtains a minimum CGPA of 6.25 in M.E. Semester-I, M.E. Semester-II taken together under reference II(2).
	5	Whenever a candidate reappears for M.E. Semester-III and M.E. Semester-IV examinations he will have to resubmit the dissertation with suitable modification and must also reappear for oral examination on it.
	6	A candidate registered for M.E. Examination must clear his examination within five years from the date of registration.
V	Attendance Requirement	
	1	Each semester of the course shall be treated as a separate unit for calculation of the attendance
	2	A candidate shall be considered to have satisfied the attendance requirement if he/she has attended not less 75% of the class in each subject of all the semesters (Theory, Laboratory, Semester Practical training and Dissertation work) actually conducted up to the end of the semester.
	3	A Candidate, who does not satisfy the attendance required, mentioned as above, shall not be eligible to appear for the Examination of that semester and shall be required to repeat that semester along with regular students later.
4	The Principal of the concerned College shall display regularly, the list of such candidates who fall short of attendance, on the Notice Boards.	

	5	The list of the candidates falling short of attendance shall be sent to the University at least one week prior to the commencement of theory/practical examination, whichever is earlier.
VI		The following are the syllabi in the various subjects of the examination for the Degree of Master of Engineering.

Dr Babasaheb Ambedkar Marathwada University, Aurangabad
Proposed Syllabus Structure of M.E. (Manufacturing Engineering) w.e.f. Academic Year 2013-14

Semester-I

Course code	Name of the Subject	Teaching Scheme Contact hours per week					Examination scheme Marks					Duration of Theory Exam	Credit
		L	T	P	Total hrs	Theory	Class Test	Term Work	Viva voce	Total			
		MME 601	Advanced Machining Science	3	1		4	80	20				
MME 602	Advance Joining Processes	3	1		4	80	20			100	3 Hrs	4	
MME 603	Computer Integrated Manufacturing	3	1		4	80	20			100	3 Hrs	4	
MME 604	Processing of Advanced Materials	3	1		4	80	20			100	3 Hrs	4

(MME 602) ADVANCE JOINING PROCESSES**Teaching Scheme:****Lectures:** 03Hrs/Week**Tutorials:** 01Hrs/Week**Credit:** 04**Examination Scheme:****Theory Paper:** 80 Marks (3 Hrs.)**Class Test:** 20 Marks

Unit	Contents	Hrs.
1	Review of conventional welding processes: Importance, Selection of process, selection of parameters and applications of Gas Welding-Oxy Acetylene, Arc Welding- TIG, MIG, MMAW, Submerged arc welding, Electroslag welding, Resistance Welding-Spot, Seam Welding. Advanced/Unique Welding Processes: Laser Beam Welding, Electron Beam Welding, Friction Welding Cold Pressure Welding, Ultrasonic Welding, Diffusion Welding.	10
2	Weld design: Weld design, weld defects, distortion and remedies, welding stresses: cause and development of residual stresses, method of controlling and relieving residual stresses in weldments. Testing of welds: tensile, impact, hardness, and corrosion. Thermal and metallurgical consideration: Thermal consideration of welding temperature distribution, heating and cooling curves. Solidification of weld, weld zones, heat affected zone and parent metal, macro & micro structure, Hydrogen embrittlement and cracking, weld cracking, hot and cold cracking.	10
3	Non-destructive testing: Introduction, in-situ metallography, dye penetrant flaw detection, application & limitation. Ultrasonic testing; advantages, disadvantages, applications, generation and characteristic of ultrasonic waves, methods and instruments for testing. Radiographic methods: Principal, sources of radiation: X-rays, gamma rays recording of radiations, limitation and radiation safety.	10
4	Magnetic and electrical methods: advantages, limitations, method of generating magnetic fields, magnetic particle testing; method and limitation. Eddy current testing method, potential drop methods, application and limitations. Other methods: Acoustic emission methods, leak detection, thermal inspection. Nondestructive inspection of welds: porosity, blowholes, inclusions, cracks. Modern Welding techniques: Welding of plastics, welding of ceramics, dissimilar material joining. Design requirements, allowable stress values, workmanship and inspection, introduction to welding codes and standards. Process and product standards for manufacturing of pipe - welding procedure and welder qualification, field welding and inspection.	10

(MME603) COMPUTER INTEGRATED MANUFACTURING**Teaching Scheme:****Lectures:** 03Hrs/Week**Tutorials:** 01Hrs/Week**Credit:** 04**Examination Scheme:****Theory Paper:** 80 Marks (3 Hrs.)**Class Test:** 20 Marks

Unit	Contents	Hrs.
1	Introduction: Evolution of CIM, CIM hardware and software, nature and role of the elements of CIM system, development of CIM, phases and steps in CIM implementation, benefits of CIM.	06
2	CIM and Communication: Local Area Network, analysis of Hierarchical architecture-strategic planning, managerial planning, operator's level. Integration of total activities, such MRP I and MRP II, ERP and control through microprocessor bus bar using PLC etc., Distributed Numerical control Machines, equipment and accessories for loading, unloading, assembly, Automated Guided Vehicles etc.	08
3	Cellular manufacturing system: Introduction to GT, benefits, part families, part Classification and coding, product flow analysis, cellular manufacturing systems, virtual cell system, quantitative analysis in cellular manufacturing.	06
4	Flexible manufacturing system: Building blocks of FMS, applications, benefits, FMS layout, FMS planning and implementation issues, quantitative analysis of FMS. Computer aided material handling system, computer control system.	08
5	DBMS in CIM: Data base management system in CIM, data acquisition, factory data collection system, data processing, data distribution, database file structure, organization and control, data structure models (hierarchical, network, relational and three schemes). Use of internet in manufacturing and business functions, E-commerce and future trends.	06
6	Economics of CIM: Strategic benefits of CIM and accounting measures, evaluation of CIM systems, breakeven analysis, return on investment in the context of CIM, CIM feasibility analysis. socio-techno economic aspects of CIM.	04

(MME 604) PROCESSING OF ADVANCED MATERIALS**Teaching Scheme:**

Lectures: 03Hrs/Week

Tutorials: 01Hrs/Week

Credit: 04

Examination Scheme:

Theory Paper: 80 Marks (3 Hrs.)

Class Test: 20 Marks

Unit	Contents	Hrs.
1	Classification and types of conventional manufacturing processes - Forging, rolling, extrusion, wire drawing, sheet metal processes. Manufacturing automation, Nontraditional manufacturing processes. Economics of nontraditional and automated manufacturing. Introduction to micromachining and MEMS. Introduction to coatings and tribology.	08
2	Rapid prototyping: Product development cycle & importance of prototyping. Types of prototypes, principles and advantages and different types of generative manufacturing processes, viz. stereolithography, FDM, SLS etc. Factors concerning to RP: consideration for adaptations, advantages, accuracy, economic considerations.	08
3	Non conventional machining processes: Introduction and need for non-conventional machining processes, Principle and theory of material removal. Process parameters, advantages, limitations and applications of Ultrasonic Machining USM, Abrasive Jet Machining AJM, Water Jet Machining WJM, Abrasive Water Jet Machining AWJM, Electro- chemical Machining ECM, Electro Discharge Machining EDM, Electron Beam Machining EBM, Laser Beam Machining LBM.	08
4	Special processes and electronic fabrication: Principles, salient features, advantages & applications of abrasive floor machining, magnetic abrasive finishing, wire EDM, electrochemical grinding, honing, lapping & super finishing. Principles, elements, process, advantages, applications & surface preparation etc. of physical vapor deposition, chemical vapor deposition, electro less coating & thermal metal spraying.	08
5	Plastic Manufacturing Processes: Compression molding, Transfer molding, Injection molding, Extrusion molding, Thermoforming, Blow molding, roto molding, Structured form molding.	08

Reference Books:

1. "HMT Handbook" – Production Technology (TMH)
2. "Non- traditional machining processes", Willer, SME publications.

ELECTIVE-I
(MME 641-A) ADVANCED OPTIMIZATION TECHNIQUES

Teaching Scheme:

Lectures: 03Hrs/Week

Tutorials: 01Hrs/Week

Credit: 04

Examination Scheme:

Theory Paper: 80 Marks (3 Hrs.)

Class Test: 20 Marks

Unit	Contents	Hrs.
1	Introduction Engineering application of Optimization, Terminology, Design Variables, Constraints, Objective Function, Variable Bounds, Problem Formulation, Engineering Optimization Problems, Calculus method, Linear Programming-Simplex method, Concept of Duality.	06
2	Single Variable Optimization Problems Optimality Criterion; Bracketing Methods: Exhaustive search method, Bounding phase method; Region Elimination Methods: Interval Halving Method, Fibonacci Search Method, Golden Section Method; Point estimation methods: Successive Quadratic Estimation Method; Gradient Based Methods; Newton-Raphson Method, Bisection Method, Secant Method, Cubic search method, Application to Root finding	08
3	Multivariable Optimization Algorithms Optimality Criteria, Unidirectional Search, Direct Search Methods: Hooke-Jeeves pattern search method, Powell's Conjugate Direction Method, Gradient Based Methods: Cauchy's Steepest Descent Method, Newton's method, Marquardt's Method.	08
4	Constrained Optimization Algorithms Kuhn Tucker conditions, Transformation Methods: Penalty Function Method, Method of Multipliers (MOM), Sensitivity analysis, Direct search for constrained minimization: Variable elimination method, Complex search method.	09
5	Genetic algorithms for optimization and search Chromosomes, Selection, Recombination, Conventional (Scattered), Crossover, Blending (Intermediate), crossover, Mutation, Single-objective optimization, Multi-objective optimization, , Simulated annealing.	09

ELECTIVE-I
(MME 641-D) REVERSE ENGINEERING AND ADDITIVE
MANUFACTURING

Teaching Scheme:

Lectures: 03Hrs/Week

Tutorials: 01Hrs/Week

Credit: 04

Examination Scheme:

Theory Paper: 80 Marks (3 Hrs.)

Class Test: 20 Marks

Unit	Contents	Hrs.
1	Introduction Scope and tasks of reverse engineering (RE) - Domain analysis- process of duplicating, introduction to rapid product development and Additive Manufacturing (AM), Market requirements for rapid product development, concept of Rapid Prototyping & Rapid Manufacturing, Generic characteristics and limitations of AM technology.	06
2	Reverse Engineering Definition of reverse engineering, History of Reverse Engineering, Preserving and preparation for the four stage process, Evaluation and Verification, Technical Data Generation, Data Verification, Project Implementation, Functionality- dimensional- developing technical data - digitizing techniques, construction of surface model solid-part material, characteristics evaluation, software and application, prototyping, verification.	08
3	Reverse Engineering Equipments Contact and non-contact methods of RE; Touch probe: operating principles, error analysis; Laser scanning: triangulation principles, system performance, case study; X-ray scanner: principles, applications and limitations	06
4	Additive Manufacturing Technology Fundamental physical/chemical mechanisms of model building; System operation principles; Properties of media, influence of process parameters, technical features; Process limitation - dimensional and geometric accuracy, surface textures and post-processing treatments; Economics and applications for the four main RP technology such as stereo lithography, fused deposition modeling, selective laser sintering/sintering, 3D printing.	08
5	Recent Developments of AM Emerging AM processes; Developments in associated rapid manufacturing; Overall evaluation and comparison of AM technology; Selection of AM systems; Applications of AM in various industrial, health care and other sectors; Design for AM.	06
6	Rapid Tooling and data management Direct and indirect tooling, AM-based rapid tooling, recent developments in rapid manufacturing; Design for additive manufacturing. Data management in reverse engineering, Software application, recycling real-time embedded software, design experiments to evaluate a Reverse Engineering tool	06

MME 621 MANUFACTURING LAB-I

Teaching Scheme

Practical: 4 Hrs/week

Credit: 02

Examination Scheme

Term Work: 50 Marks

Course Objective

To expose the student to the Computer Aided Manufacturing practices followed in the industry.

The Lab work shall consist of following exercises.

1. Generating and simulating CNC part programs (at least two exercises each).

Note: A different exercise shall be given to each student in the batch.

1.1) Preparing a suitable CAD model for a part to be turned and generating the CNC part program to machine the same on a CNC lathe from the given form of raw material using a suitable CAM software and a post processor.

1.2) Preparing a suitable CAD model for a part to be machined and generating the CNC part program to machine the same on a CNC machining center (vertical/horizontal) from the given form of raw material using a suitable CAM software and a post processor. (2 dimensional machining like drilling, surface or slot milling etc.)

2. Generating a simple part program using CAM software and executing it on a CNC machine on CNC lathe or CNC machining center.

Note: A different exercise shall be given to each group of six students in the batch.

The evaluation of the work done by the student will be based on a file documenting the practical work and assignment carried out during the course followed by a viva-voce examination. The journal shall consist of the printouts and report of following experiments.

MME 622 MEASUREMENTS AND INSTRUMENTATION LAB

Teaching Scheme

Practical: 2 Hrs/week

Credit: 01

Examination Scheme

Viva -voce: 50 Marks

The laboratory work shall consist of exercises as given below.

1. Measurement of forces using strain gauges and study of static characteristics.
2. Measurement of temperature using minimum two types of temperature sensors and study of static characteristics
3. Pressure measurement using manometer, dead weight tester and Bourdon tube; Static calibration.
4. Flow measurement using rotameter/turbine flow meter,
5. Displacement, rotational speed and velocity measurement
6. Measurement of vibrations of machine tool members / structures
7. Static performance characteristics of operational amplifiers
8. Analog to Digital and Digital to Analog conversion of electrical signals
9. Use of Proportional/Integral/Derivative mode for measurement and control of speed/pressure/temperature

The Practical Examination will consist of viva voce based on the syllabus and term work. The practical examination will be assessed by two examiners, one will be the subject teacher and other examiner appointed by Dr. B.A.M.U. Aurangabad.

MME 623 SEMINAR – I**Teaching Scheme****Practical:** 2 Hrs/week**Credit:** 01**Examination Scheme****Viva -voce:** 50 Marks

Seminar – I shall be based on the literature survey on any topic, which will lead to dissertation in that area. It will be submitted as a report of about 30 pages. The candidate will have to deliver a seminar presentation before the examiners, one of them will be guide and the other will be examiner appointed by the university.

(MME 651) METAL FORMING PROCESSES**Teaching Scheme:****Lectures:** 03Hrs/Week**Tutorials:** 01Hrs/Week**Credit:** 04**Examination Scheme:****Theory Paper:** 80 Marks (3 Hrs.)**Class Test:** 20 Marks

Unit	Contents	Hrs.
1	Theory of plasticity : Theory of plastic deformation – Yield criteria – Tresca and Von-mises – Distortion energy – Stress-strain relation, Strain hardening, Material incompressibility, Work of plastic deformation, Work hardening,– Mohr’s circle representation of a state of stress (numerical)– cylindrical and spherical co-ordinate system – upper and lower bound solution methods – Overview of FEM applications in Metal Forming analysis. Initiation and extent of plastic flow (microstructural point of view). Analysis of forming processes, Slab method, other methods of analysis like FEM, upper & lower bound, slip line field.	10
2	Theory and practice of bulk forming processes: Analysis of plastic deformation in Forging, Rolling, Extrusion, rod/wire drawing and tube drawing – Effect of friction – calculation of forces, work done – Process parameters, equipment used – Defects – applications – Recent advances in Forging, Rolling, Extrusion and Drawing processes – Design consideration in forming.	10
3	Sheet metal forming: Sheet forming; blanking, piercing, press bending, deep drawing, stretch forming, spinning, hydro forming, rubber-pad forming, explosive forming, Formability of sheet, Formability tests, Forming limit diagrams, Process simulation for deep drawing and numerical approaches.	10
4	Surface treatment and metal forming applications: Influence of temperature and gliding velocity – Friction heat generation – Friction between metallic layers – Lubrication carrier layer – Surface treatment for drawing, sheet metal forming, Extrusion and hot and cold forging. Processing of thin Al tapes – Cladding of Al alloys – Duplex and triplex steel rolling Thermo mechanical regimes of Ti and Al alloys during deformation Formability welded blank sheet – Laser structured steel sheet - Formability of laminated sheet.	10

(MME 652) MANUFACTURING PROCESS MODELING**Teaching Scheme:****Lectures:** 03Hrs/Week**Tutorials:** 01Hrs/Week**Credit:** 04**Examination Scheme:****Theory Paper:** 80 Marks (3 Hrs.)**Class Test:** 20 Marks

Unit	Contents	Hrs.
1	Introduction to Manufacturing Process Modeling:- Types of Models, Principles of modeling. Automated Manufacturing System.	02
2	Simulation:- Introduction to simulation, need, models, application areas of simulation, discrete-event distributed, continuous, combined discrete-continuous and monte carlo simulation, modeling of queuing & inventory problems for simulation.	08
3	Graph theory: - Introduction, Paths & circuit. Trees & fundamental Circuits, representation of graphs, graph theoretic algorithms, applications of graphs in mfg.	08
4	Regression methods:- Introduction, models coefficient of co relation, least square methods, multiple regression, fuzzy variables, fuzzification & defuzzification & fuzzy regression, applications to mfg.	08
5	Neural network: - Introduction, supervised & unsupervised learning, layered modeling of networks, application of neural network to classification & recognition problems.	08
6	Search techniques: - Introduction to one dimensional & multidimensional search, genetic algorithm and simulated annealing.	06

Reference Books:

1. "Graph Theory" By Narsing Deo, PHI.
2. "Simulation" By J. Banks. PHI.

(MME 653) ROBOTICS AND MANUFACTURING AUTOMATION**Teaching Scheme:****Lectures:** 03Hrs/Week**Tutorials:** 01Hrs/Week**Credit:** 04**Examination Scheme:****Theory Paper:** 80 Marks (3 Hrs.)**Class Test:** 20 Marks

Unit	Contents	Hrs.
1	Introduction: Robot classification, applications in manufacturing, kinematics of robot, programming and robot languages, performance characteristics of robot, end effectors, Robot kinematics: Forward and Inverse kinematics.	04
2	Developments in Grippers and Sensors: End effectors and Different types of grippers, vacuum and other methods of gripping. Tactile array sensors, close circuit control for tactile grippers and sensors, variable pressure and light converting sensors, viscoelastic membrane type sensors, piezoelectric sensors, high resolution pneumatic tactile sensors, roller type slip sensors, special gripper design analysis force through FEM for viscoelastic analysis.	08
3	Development in drives: Stepper motor drive : construction, working, step angle, stepping rate, torque dynamic, detent torque, switching scheme, wave and phase techniques and transient response.	04
4	D.C. Servo system motor : PID control and position feedback, Hydraulic and pneumatic actuation – Rotary hydraulic drive, microprocessor based pneumatic control.	04
5	Robot applications in Manufacturing process : Robotized welding, MIG, Spot welding, working principle, applications of robots in material transfer, machine loading, assembly and inspection, continuous arc welding, spray coating machining, die casting, drilling, routing, grinding, wire brushing, water jet cutting, laser cutting, riveting and similar operations interfacing with controller or PC, Use of simulation packages, Robotized inspection, Vision system with preprocessing segmentation, pattern recognition, interpretation, image sensing, digitizing, image processing, smoothing of image, vision equipments, CCD, raster scan, line scan, area sensing, automatic visual inspection, distance controlled robot, medical, bioengineering and genetic applications.	14
6	Robot Path Control: Contour path and blending techniques, obstacle avoidance, LEE's algorithm, cubic polynomial with via points.	06

Reference Books:

1. Robotics Technology and Flexible Automation, S.R. Deb, Tata McGraw Hill
2. Robotics : Control, sensors, vision and intelligence,

**(MME 654) MANUFACTURING METROLOGY AND QUALITY
ENGINEERING**

Teaching Scheme:

Lectures: 03Hrs/Week

Tutorials: 01Hrs/Week

Credit: 04

Examination Scheme:

Theory Paper: 80 Marks (3 Hrs.)

Class Test: 20 Marks

Unit	Contents	Hrs.
1	Laser Metrology Introduction – types of lasers – laser in engineering metrology – metrological laser methods for applications in machine systems – Interferometry applications – speckle interferometry – laser interferometers in manufacturing and machine tool alignment testing – calibration systems for industrial robots laser Doppler technique – laser Doppler anemometry.	08
2	Precision Instruments Based on Laser Laser telemetric systems – detection of microscopic imperfections on high quality surface Pitter NPL gauge interferometer – classification of optical scanning systems – high inertia laser scan technique – rotating mirror technique – laser gauging – bar coding – laser dimensional measurement system.	08
3	Co-ordinate Measuring Machine Co-ordinate metrology – CMM configurations – hardware components – software –Probe sensors – displacement devices – Performance Evaluations – Software –Hardware – Dynamic errors – Thermal effects diagram – temperature variations environment control – applications.	09
4	Opto Electronics and Vision System Opto electronic devices – CCD – On-line and in-process monitoring in production –applications image analysis and computer vision – Image analysis techniques – spatical feature – Image extraction – segmentation – digital image processing – Vision system for measurement – Comparison laser scanning with vision system.	09
5	Computer Integrated Quality Assurance Total quality control - quality assurance - Zero defects-POKA-YOKE Statistical evaluation of data using computer-data integration of CMM and data logging in computers - TQM.	06

ELECTIVE-II
(MME 691-A)RELIABILITY AND MAINTENANCE ENGINEERING

Teaching Scheme:

Lectures: 03Hrs/Week

Tutorials: 01Hrs/Week

Credit: 04

Examination Scheme:

Theory Paper: 80 Marks (3 Hrs.)

Class Test : 20 Marks

Unit	Contents	Hrs.
1	Introduction: Reliability concepts and patterns of failure, reliability Management, reliability, for system effectiveness. Reliability and hazard rates: Failure data, reliability function, failure rate and hazard rate, common distributions in failure mechanisms – experimental, Weibull, gamma, Normal, log normal, extreme value, model selection for components failure, failure analysis.	6
2	System Reliability: Series, parallel and mixed configurations. k-out-of-n-structure. Economics of introducing a standby or redundancy into a production system, Logic Diagrams, Markov Model. Fault-Tree Analysis and Other Techniques: Fault-tree Construction, Calculation of Reliability, Tie- set and Minimal Tie-set.	8
3	Reliability design: Design for reliability, design process, assessment methodology, reliability allocation, reliability improvement, selection of components to improve system reliability Reliability Testing: Product Testing, Reliability Life Testing, Burn –In Testing, Accelerated Life testing.	8
4	Maintenance Engineering: Fundamentals of Maintenance Engineering, importance of Maintenance, types of maintenance policies: corrective maintenance, preventive maintenance, condition monitoring and its techniques. Emerging trends in maintenance-Proactive Maintenance, Total Productive Maintenance (TPM). Reliability Centered Maintenance (RCM), RCM approach, RCM methodology, Application of RCM: examples and computers implementation.	8
5	Replacement Decisions: Economic models, block replacement policy, age replacement policy, replacement policies to minimize downtime, economics of preventive maintenance. Inspection Decisions: Optimal inspection frequency to profit maximizing, minimization of downtime and availability maximization.	10

ELECTIVE-II
(MME 691-B) TRIBOLOGY

Teaching Scheme:**Lectures:** 03Hrs/Week**Tutorials:** 01Hrs/Week**Credit:** 04**Examination Scheme:****Theory Paper:** 80 Marks (3 Hrs.)**Class Test:** 20 Marks

Unit	Contents	Hrs.
1	Introduction to Tribology:- Importance of Lubrication, (Boundary Lubrication and Film Lubrication), Bearing, Friction, Wear, General Tribology considerations in the design of gears, Cams, Reciprocating components, etc. Engine Tribology basics- Tribology aspects of engine components such as bearings, piston assembly, valve train and drive train components etc.	04
2	Surface roughness and its standardization measurement techniques:- Standardization: Introduction. M and E system. Measurement: Measurement techniques and instruments. Statistical analysis of surface:- Statistical analysis of surface, contacting areas, apparent area of contact, real area of contact, Abby's bearing area curve, load Vs contact ratio.	06
3	Friction and wear:- Friction:- Causes of Friction, Adhesion Theory, Abrasive Theory, Junction Growth Theory, Laws of Rolling Friction, Friction Instability, Friction-sliding friction-rolling friction characteristics of common metals and nonmetals friction under extreme environments, Engine friction- Losses and engine design parameters. Wear :- Wear Mechanisms, Adhesive Wear, Abrasive Wear, Corrosive Wear, Fretting Wear, Economic role of wear, type of wear, wear mechanism, factors affecting wear. selection of materials for different wear situations, measurement of wear, tribometers and Tribometry, Pinion- disc method of measuring friction and wear. Engine wear-mechanisms, Wear resistance material and coatings and failure mode analysis.	10
4	Lubrication of Bearings:- Hydrodynamic Bearing:- Mechanics of Fluid Flow, Reynold's Equation and its limitations, idealized bearings, Infinitely long plane pivoted and fixed show sliders, infinitely long and infinitely short (narrow) journal bearings, lightly loaded infinitely long journal bearing (Petroff's solution). Finite Bearings:- Hydrostatic, Hydrodynamic and thrust oil bearings, heat in bearings. Hydrostatic squeeze film:- Circular and rectangular flat plates, variable and alternating loads, piston pin lubrications, application to journal bearings. Elasto-hydrodynamic Lubrication:- Pressure-viscosity term in Reynold's Equation, Hertz theory, Ertel-Grubin Equation, lubrication of spheres. Air lubricated bearings:- Tilting pad bearings, hydrostatic, hydrodynamic and thrust bearings with air lubrication.	12
5	Rheodynamic (static) lubrication: Non-Newtonian fluids, characteristics, Thixotropic, materials and Bingham	06

	solids, Grease lubrication and stability, Tribology of components in extreme environments like vacuum, pressure, temperature.	
6	Application of Tribology:- Introduction, Rolling Contact Bearings, Gears, Journal Bearings - Finite Bearings	02

(MME 691-C) NANO AND MICRO FABRICATION TECHNIQUES

Teaching Scheme:

Lectures: 03Hrs/Week

Tutorials: 01Hrs/Week

Credit: 04

Examination Scheme:

Theory Paper: 80 Marks (3 Hrs.)

Class Test: 20 Marks

Unit	Contents	Hrs.
1	OVER VIEW OF MEMS AND MICROSYSTEMS Definition – historical development – fundamentals – properties, micro fluidics, design and fabrication micro-system, microelectronics, working principle and applications of micro system.	04
2	MATERIALS, FABRICATION PROCESSES AND MICRO SYSTEM PACKAGING Substrates and wafers, silicon as substrate material, mechanical properties of Si, Silicon Compounds silicon piezo resistors, Galium arsenide, quartz, polymers for MEMS, conductive polymers. Photolithography, photo resist applications, light sources, in implantation, diffusion process exudation – thermal oxidation, silicon diode, chemical vapour deposition, sputtering - deposition by epitaxy – etching – bulk and surface machining – LIGA process Micro system packaging – considerations packaging – levels of micro system packaging die level, device level and system level.	08
3	MICRO DEVICES AND MATERIALS Sensors – classification – signal conversion ideal characterization of sensors micro actuators, mechanical sensors – measurands displacement sensors, pressure and flow sensors, micro actuators – smart materials – applications.	05
4	SCIENCE OF NANO MATERIALS Classification of nano structures – effect of the nanometer length scale effects of nano scale dimensions on various properties – structural, thermal, chemical, mechanical, magnetic, optical and electronic properties – effect of nanoscale dimensions on biological systems. Fabrication methods – Top down processes – bottom up process.	06
5	CHARACTERIZATION OF NANO MATERIALS Nano-processing systems – Nano measuring systems –characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, transmission electron microscopy, transmission electron microscopy, scanning tunneling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.	07

ELECTIVE-II
(MME 691-D) MANUFACTURING MANAGEMENT

Teaching Scheme:

Lectures: 03Hrs/Week

Tutorials: 01Hrs/Week

Credit: 04

Examination Scheme:

Theory Paper: 80 Marks (3 Hrs.)

Class Test: 20 Marks

Unit	Contents	Hrs.
1	Scope of Manufacturing Management: History and development of Manufacturing Management - Contribution of various pioneers beginning from Division of Labor to Quality Revolution and Environmental Control. Manufacturing Management - Nature, Scope, Importance and Functions.	06
2	World Class Manufacturing: Concept, quality management system, manufacturing challenges of information age, lean and agile manufacturing, reconfigurable manufacturing, green production ,PLC, TRM, IG, computerized production management system, World-Class Manufacturing: The Indian Scenario, Leading India Towards World-Class Manufacturing, TQM,TPM,SIX SIGMA.	08
3	JIT: Just in Time Manufacturing, elimination of waste, sequencing for JIT mixed model assembly lines, supply management for JIT, Push-Pull system. KANBAN, Production smoothening, Jidoka, Andon.	06
4	KAIZEN- Concept, Kaizen system, Kaizen umbrella, PDCA cycle, 5S, Kaizen evaluation, GEMBA Kaizen.	06
5	Supply Chain Management: Introduction, SCM concepts, dynamic behavior of supply chain systems, advanced planning and scheduling (APS) and SCM management, order promise and inventory management.	08
6	Lean Manufacturing: Elements of lean manufacturing, implementation, transforming from traditional to lean manufacturing, lean tools and techniques for: waste reduction, SMED, one piece flow, pull system.	06

MME 671 MANUFACTURING LAB-II

Teaching Scheme

Practical: 4 Hrs/week

Credit: 02

Examination Scheme

Term Work: 50 Marks

Course Objective

The objective of this course is to prepare students with manufacturing knowledge, in an industrial environment, and inculcate the ability to solve problems.

Min two Industrial based case studies/ practices /Assignment tasks on any of the following

1. Simulation of manufacturing such as Rolling/ forging / forming process simulation using CAE/FEM.
2. Rolling / forging / forming defect analysis and prevention.
3. Study of any one RPT (additive manufacturing) process
4. Study of Non-Destructive Testing of materials for defects analysis and measurement purposes.
5. Study of metal removal rate/ tool wear in non conventional machining methods such as WEDM, EDM, AJM.
6. Case studies on special manufacturing processes.
7. Study on design and manufacturing of special purpose fixtures for industrial component.
8. Case study on application of robots in manufacturing.
9. Case study on Manufacturing cost reduction and productivity improvement.

Note: The evaluation of the work done by the student will be based on a file documenting the case studies / practices / assignments carried out during the course followed by a viva-voce examination. Internal guide may be allotted to each student.

MME 672 AUTOMATION AND SIMULATION LAB

Teaching Scheme

Practical: 2 Hrs/week

Credit: 01

Examination Scheme

Viva -voce: 50 Marks

The laboratory work shall consist of exercises as given below

- 1) Design of hydraulic / pneumatic circuits for different machine tools, automation projects and their performance testing
- 2) Study, design / simulation of automation projects in material handling/packaging
- 3) Exercise on flexible automation using PLC, different sensors and actuators
- 4) Exercise on control of electrical motors using microcontroller / microprocessor.
- 5) Simulation of Robotic system for automation using a suitable software
- 6) Simulation of Electrohydraulic / Electropneumatic circuits using a suitable software –like FESTO PneuSim & HydroSim or Automation Studio or similar simulation software

The Practical Examination will consist of viva voce based on the syllabus and term work. The practical examination will be assessed by two examiners, one will be the subject teacher and other examiner appointed by Dr. B.A.M.U. Aurangabad.

MME 673 SEMINAR – II**Teaching Scheme****Practical: 2 Hrs/week****Credit: 01****Examination Scheme****Viva -voce: 50 Marks**

Seminar – II shall be based on the literature survey on any topic, (preferably in continuation with the Seminar – I) which will lead to dissertation in that area. It will be submitted as a report of about 40 pages.

The candidate will have to deliver a seminar presentation before the examiners, one of them will be guide and the other will be examiner appointed by the university.

MME 731 DISSERTATION – I**Teaching Scheme:****Contact Hours:** 12 Hrs/week**Credit:** 12**Examination Scheme:****Term Work:** 50 Marks**Viva-voce:** 50 Marks

The dissertation shall consist of a report on any research work done by the candidate or a comprehensive and critical review of any recent development in the subject or detailed report of the project work consisting of a design and / or development work that the candidate has executed. The dissertation will consist of two parts as dissertation part-I and dissertation II.

Term work:

The dissertation part I will be in the form of seminar report on the project work being carried out by the candidate and will be assessed by two examiners appointed by the university, one of whom will be the guide and other will be a senior faculty member from the department.

Viva-voce:

The dissertation part I will be in the form of seminar report on the project work being carried out by the candidate and will be assessed by two examiners appointed by the university, one of whom will be the guide and other will be an external examiner.

MME 781 DISSERTATION – II

Teaching Scheme:**Contact Hours:** 20 Hrs/week**Credit:** 20**Examination Scheme:****Term Work:** 100 Marks**Viva-voce:** 200 Marks

The dissertation part - II will be in continuation of dissertation part - I and shall consist of a report on the research work done by the candidate or a comprehensive and critical review of any recent development in the subject or detailed report of the project work consisting of a design and / or development work that the candidate has executed. The examinee shall submit the dissertation in triplicate to the head of the institution duly certified by the guide and the concerned head of department and the principal that the work has been satisfactorily completed.

Term work:

The dissertation will be assessed by two internal examiners appointed by the Institute, one of whom will be the guide and other will be a senior faculty member from the department.

Viva voce:

It shall consist of a defense presented by the examinee on his work in the presence of examiners appointed by the university, one of whom will be the guide and other will be an external examiner.
