

**Dr. BABASAHEB AMBEDKAR MARATHWADA UNIVERSITY,  
CHHATRAPATI SAMBHAJINAGAR.**

**CIRCULAR NO.SU/ Sci./Deptt./NEP-2020/85/2024**

It is hereby inform to all concerned that, the syllabus prepared by the Departmental Committee and recommended by the Dean, Faculty of Science & Technology, **Academic Council at its meeting held on 08 April 2024 has accepted the Syllabus of M.Sc. Mathematics IIIrd and IVth semester under the Faculty of Science & Technology as per Norms of National Education Policy – 2020 run at Department of Mathematics , Dr.Babasaheb Ambedkar Marathwada University, Chhatrapati Sambhajinagar** as appended herewith.

This is effective from the Academic Year 2023-24 and onwards.

All concerned are requested to note the contents of this circular and bring the notice to the students, teachers and staff for their information and necessary action.

University Campus,  
Chhatrapati Sambhajinagar  
-431 004.  
REF.NO. SU/SCI./2024/26060-68  
Date:- 03.05.2024.

- 7] The Record Keeper, Dr.Babasaheb Ambedkar Marathwada University, Chhatrapati Sambhajinagar.

**DR. BABASAHEB AMBEDKAR MARATHWADA  
UNIVERSITY, CHHATRAPATI SAMBHAJINAGAR- 431004.**

**NAAC Re-Accredited 'A' Grade**

**FACULTY OF SCIENCE & TECHNOLOGY**

**2 Years P.G. Programme**

**As Per National Education Policy-2020**

**SUBJECT: MATHEMATICS**

**(Out Come Based Credit System)**

**Effective from Academic Year 2023-24**

**DEPARTMENT OF MATHEMATICS**

**(Autonomous)**

**Dr. Kirtiwan P. Ghadle**  
Professor and Head  
Department of Mathematics,  
Dr. Babasaheb Ambedkar Marathwada University,  
Chhatrapati Sambhajinagar-431004 (M.S.) INDIA

## **PREAMBLE**

As per the decision and directives of UGC and Government of Maharashtra (NEP-2020) the Post Graduate program in Mathematics that is 2 Year/1 Year Post Graduate program is designed which will be implemented in the department of Mathematics, Dr. Babasaheb Ambedkar Marathwada University, Chhatrapati Sambhajnagar from the academic year 2023-24. While preparing this program the discussion with all the stake holders, resource persons and experts is taken into account. The program is aimed to develop knowledgeable and skillful human resources for local, national and international needs. The program caters the abstractness as well as the applicability of Mathematics to the learners.

**Dr. Kirtiwanth P. Ghadle**  
Professor and Head  
Department of Mathematics,  
Dr. Babasaheb Ambedkar Marathwada University,  
Chhatrapati Sambhajnagar-431004 (M.S.) INDIA

After Successful completion of this post graduate programme in  
Mathematics of 88 credits

**Programme Outcomes (POs):**

The student will:

PO 1:- enter in the areas of current and advanced fields of Mathematics

PO 2:- develop analytical, scientific and critical thinking.

PO 3:- be able to apply Mathematical techniques to solve real life problems

PO 4:- be able to undertake research in mathematics and allied disciplines.

PO 5:- be employable in government, Scientific & Academic Institutions private sector autonomous bodies and industries.

**Programme Educational Objectives (PEOs):-**

PEO 1:- To introduce a core and advanced branches of Mathematics

PEO 2:- To inculcate computational and numerical skills.

PEO 3:- To undertake advance research.

PEO 4:- To develop soft skills related to the subject

**Programme Specific Objectives (PSOs):-**

PSO 1:- To understand and develop the skills in various mathematical analysis techniques.

PSO 2:- To develop mathematical modeling skill

PSO3:- To equip students with latest mathematical software's.

PSO 4:- To develop problem solving and numerical skills.

**Dr. Kirtiwant P. Ghadle**  
Professor and Head  
Department of Mathematics,  
Dr. Babasaheb Ambedkar Marathwada University,  
Chhatrapati Sambhajinagar-431004 (M.S.) INDIA

## Two-Year Post-graduate Program

Course and Credits Distribution of Two years/ PG/Master's Degree Program with Entry & Exit Option

**Dr. Kirtiwant P. Ghadle**  
 Professor and Head  
 Department of Mathematics  
 Dr. Babasaheb Ambedkar Marathwada University  
 Chhatrapati Sambhajinagar-431004 (M.S.)

**Course Type: Major**

**Contact Hours: 60 (4 per week)**

**Course Name: Functional Analysis**

**Credits: 4**

**Course Code: SAD366003T**

**Marks: 100**

**Course Objective:** To introduce Banach and Hilbert spaces.

**Course Outcome:** The students will be able to study various fixed point theorems and spectrum of normal and self-adjoint operators which will be useful to them in proving existence of solutions of various equations.

**Content:**

**Unit - I** Definition of normed linear spaces, Banach spaces, continuity of norm, joint continuity of vector addition and scalar multiplication in normed linear spaces, quotient spaces, Continuous linear transformations and different criterions of continuity of linear transformations on normed linear spaces, space of bounded linear transformations, isometric isomorphism.

**Unit – II** Conjugate spaces, Hahn-Banach theorem and its consequences, natural imbedding of normed linear space into its second conjugate, The Open Mapping theorem, the Closed graph theorem, the Uniform Boundedness theorem, conjugate of an operator.

**Unit - III** Inner product spaces, Schwarz's inequality, joint continuity of an inner product, parallelogram law in inner product spaces, Hilbert spaces, Orthogonal complements.

**Unit - IV** Orthonormal sets and complete orthonormal sets, conjugate space of a Hilbert space, adjoint of an operator, self-adjoint operators, normal and unitary operators.

**Text Book:**

Introduction to topology and modern analysis, G. F. Simmons (Tata McGraw-Hill Edition 2004)

**Reference Book:**

Principles of Functional Analysis, Martin Schechter (American Mathematical Society, 2002)

  
Dr. Kirtwant P. Ghadle  
Professor and Head  
Department of Mathematics,  
Dr. Babasaheb Ambedkar Marathwada University,  
Chhatrapati Sambhajnagar-431004 (M.S.) INDIA

**Course Type: Major**

**Contact Hours: 60 (4 per week)**

**Course Name: Partial Differential Equations**

**Credits: 4**

**Course Code: SAD366013T**

**Marks: 100**

**Course Objective:** To know: Fundamentals of DE and PDE, General analysis of PDE, Fundamentals Linear and Nonlinear PDE and Fundamentals Jacobi's method, Charpit's Method

**Course Outcome:** Student will become familiar with DE and PDE to find the solutions, Student will be able to analysis to classify the second order PDE, Student will become familiar with how to find the general solution of PDE by using Jacobi's method, Charpit's Method.

**Content:**

**Unit - I** First order partial differential equation, linear equations of the first order, integral surface passing through a curve, surfaces orthogonal to a given system of surfaces.

**Unit - II** Non-linear partial differential equations of the first order, Cauchy's method of characteristics, compatible system of first order equations (condition of compability), Charpit's method.

**Unit - III** Special types of first order equations, solutions satisfying given conditions, Integral surface through a curve, Derivation of one complete integral from another, Integral surfaces circumscribing a given surfaces, Jocabi's method for solving  $F(x, y, z, p, q) = 0$ .

**Unit - IV** The origin of second order equations, linear partial differential equations with constant coefficients, intermediate integrals or first integrals, Monge's method of integrating  $Rr + Ss + Tt = V$ , classification of second order partial differential equation (Canonical form).

**Text book: Ian Sneddon:** Elements of Partial Differential Equation, Dover Publication, McGraw – Hill Book Company, New York, 1957. (Chapters 2, 3, 5 and 6)

**Reference books: (1) T. Amarnath:** An elementary course in partial differential equation (2<sup>nd</sup> Edition) – Narosa Publishing House 2003.

**(2) M.D. Raisighania:** Ordinary and Partial Differential Equation, S. Chand & Company Ltd, New Delhi.

  
Dr. Kirtiwant P. Ghadle  
Professor and Head  
Department of Mathematics,  
Dr. Babasaheb Ambedkar Marathwada University,  
Chhatrapati Sambhajinagar-431004 (M.S.)

**Course Type: Major**

**Contact Hours: 60 (4 per week)**

**Course Name: Numerical Analysis**

**Credits: 4**

**Course Code: SAD366023T**

**Marks: 100**

**Course Objective:** To know: the various numerical iterative methods for solving a given equation, the various numerical iterative methods for solving a given system of equations, the various interpolating methods for finding interpolating polynomial, Numerical differentiation and integration of the various interpolating polynomial.

**Course Outcome:** Student will become capable find solutions of a given equation as well as given system of equations, also to find interpolating polynomials using the various interpolating methods their differentiation and integration.

**Content:**

**Unit - I** Solution of algebraic and transcendental equations: Introduction; Bisection method; Iteration methods based on first degree equations: Newton Raphson method; Secant and Regular falsi methods, Rate of convergence for secant method and Newton Raphson method; General iteration methods.

**Unit - II** System of Linear Algebraic equations: Introduction; Linear system of Equations: Direct methods; Gauss Elimination method; Gauss -Jordan Elimination method; Triangularization method; Iteration methods; Jacobi iteration method; Gauss seidal iteration method; successive over Relaxation (SOR) method.

**Unit - III** Interpolation and approximation: Introduction; Langrange and Newton Interpolations; Finite difference operators; Interpolating polynomial using finite difference; Hermite interpolation; piecewise and spline interpolation.

**Unit - IV** Differentiation and integration: Introduction; Numerical Differentiation; Numerical Integration; Methods based on interpolation; Trapezoidal rule, Simpson's 1/3 rule, Simpson's 3/8 rule.; Composite Integration methods; Gauss quadrature methods; Gauss-Legendre Integration methods; Gauss-Legendre Formulas.

**Course Type: Major**

**Contact Hours: 60 (4 per week)**

**Course Name: Python Programming**

**Credits: 2**

**Course Code: SAD366033P**

**Marks: 100**

**Course Objective:** To introduce the Python programming language to tackle mathematical problems

**Course Outcome:** The students will be able to writing of string, list, tuple, Writing Input output functions, Use of looping statements, conditional statements in Python Programming language

**Content:**

**Unit 1:** Basics of python, Basic arithmetic, Integers, Reals and complex numbers, Objects and their types, importing libraries in Python, Variables, Equalities and Boolean statements, Strings, Input output. Lists and tuples, Data, Lists as objects, Tuples, importing data, working with data.

**Unit II :** Decision Making, Loops and repetitions, For loop, Nested for loop, While loops Functions, Scope of functions, Functions default values, function Specific types, Functional programming, Lists Comprehension, Sets and Dictionaries, Generators, The Sympy library, Numpy library, matplotlib.

**Recommended and Reference Books:**

**Course Type: Elective**

**Contact Hours: 60 (4 per week)**

**Course Name: Fluid Mechanics-I**

**Credits: 4**

**Course Code: SBD366043T**

**Marks: 100**

**Course Objective:** To know fundamentals of fluids, General Analysis of fluid motions, fluid pressure, Fundamentals of motion, Fundamentals of two dimensional flows

**Course Outcome:** Student will become familiar with real and ideal fluids, fluid motion and other related properties.

**Content:**

**Unit - I** Review of vector Analysis, Kinematics: Lagrangian and Eulerian methods (Rathy) Real and ideal fluids, velocity at a point, streamlines, path lines, streak lines, velocity potential, irrotational and rotational motions (Rathy), vorticity and circulation, Local and particle rates of change, The equation of continuity.

**Unit - II** Acceleration of a Fluid, Conditions at rigid boundary, General analysis of fluid motion, Pressure at a point in a fluid at rest and moving fluid, conditions at a boundary of two inviscid immiscible fluids, Euler's equation of motion, Bernoulli's equation.

**Unit - III** Steady motion under conservative body forces, Potential Theorems, Axial symmetric flows, some two dimensional flows, Impulsive motion, some aspects of vortex motion, sources, sinks, doublets and their images.

**Unit - IV** Some two dimensional flows: Meaning of two dimensional flow, use of cylindrical polar coordinates, The stream function, The complex potential for two dimensional irrotational, incompressible flow, complex velocity potentials for standard two dimensional flows.

**Course Type: Elective**

**Contact Hours: 60 (4 per week)**

**Course Name: Operation Research - I**

**Credits: 4**

**Course Code: SBD366053T**

**Marks: 100**

**Course Objective:** Students who take this course can expect to know Fundamentals of Linear Programming Problems and methods of their solutions

**Course Outcome:** Student will become familiar with Linear Programming Problems and will be able to find solution; Students will be able to handle Industrial Problem like – Transportation Problem, and Assignment Problem using various given methods.

**Content:**

**Unit - I** Operations research and its scope, Necessity of operations research in industry, Linear programming problems, convex sets, feasible solutions, formulation of L.P.P. method for solution of LPP.

**Unit - II** Graphical solution of L.P.P, Simplex method; theory and problems. Computational procedure, artificial variables inverse of a matrix using simplex method.

**Unit - III** Duality in L.P.P., Concept of duality, properties, dual simplex method, its algorithm. parametric linear programming.

**Unit - IV** Transportation and assignment problems, various methods.

**Contact Hours: 60 (4 per week)**

**Course Name: Wavelet Analysis**

**Credits: 4**

**Course Code: SBD366063T**

**Marks: 100**

**Course Objective:** To introduce the latest mathematical technique of wavelet analysis

**Course Outcome:** The student can use the analysis and synthesis of signal in orthogonal And bi orthogonal wavelet system and construct certain wavelet systems

**Content:**

**Unit -I:** - Preliminary introduction to Fourier series and Fourier Transform with properties. Windowed Fourier Transform (STFT), Continuous Wavelet Transform, admissibility condition, Fourier transform of wavelet transform, Parseval's relation and inversion theorem, Properties wavelet transform.

**Unit - II:-** Discrete Wavelet Transform :- Harr Scaling Functions, Nested Spaces, Harr Wavelet Function, Orthogonality, Normalization at different Scales, Refinement Relation, Support of a Wavelet System, Daubechies Wavelets. Designing Orthogonal Wavelet System: -Refinement relations for orthogonal wavelet systems, Restrictions on filter coefficients.

**Unit-III:-**Filter Banks:- Signal Decomposition, Relation with filter Banks, signal Reconstruction, Upsampling and Filtering. Biorthogonality in Vector Space, Biorthogonal Wavelet Systems and Signal representation, Biorthogonal Analysis, Biorthogonal Synthesis-From Coarse Scale to Fine Scale, Construction of Biorthogonal Wavelet System.

**Unit-IV:-**Generating and Plotting of Parametric Wavelets: Orthogonality Conditions and Parameterization, Poly phase Matrix and Recurrence Relation, Wavelet Packet Analysis, Haar wavelet packet. B-splines scaling function, orthogonalization of Causal /B-splines scaling function, Anti Causal B-splines, Symmetric splines, Differentiation of B-splines, Fractional Splines.

**Text Book:**

**Course Type: Elective**

**Contact Hours: 60 (4 per week)**

**Course Name: Difference Equations**

**Credits: 4**

**Course Code: SBD366073T**

**Marks: 100**

**Course Objective:** To study the Difference equations to solve numerical problems

**Course Outcome:** Learns to solve various problems and applications in various fields.

**Content:**

**Unit - I** Introduction, Difference Calculus-The Difference Operator summation, Generating functions and approximate summation,

**Unit - II** Linear difference Equations- first order equations, General results for linear equations. Equations with constant coefficients

**Unit - III**

Application, Equations with variable coefficients nonlinear equations, which can be linearized, The Z transform

**Unit - IV**

Stability Theory- Initial value problems for linear systems. Stability of linear systems Stability of nonlinear systems chaotic behaviors

**Text Book:**

**Course Type: Elective**

**Contact Hours: 60 (4 per week)**

**Course Name: Ordered Fuzzy Numbers**

**Credits: 4**

**Course Code: SBD366083T**

**Marks: 100**

**Course Objective:** To introduce the theory of Ordered Fuzzy Numbers. Examples and Applications

**Course Outcome:** Student will become capable to distinguish between Two Approaches to Fuzzy Implication. Model Based on Ordered Fuzzy Numbers and fuzzy control

**Content:**

**Unit – I** Background of Fuzzy Set Theory; Basic knowledge to Fuzzy Sets, Basic knowledge to to Fuzzy Systems with their suitable examples.

**Unit – II** Theory of Ordered Fuzzy Numbers: Ordered Fuzzy Numbers: Sources and Intuitions, Ordered Fuzzy Numbers: Definitions and Operations, Processing Direction with Ordered Fuzzy Numbers, Comparing Fuzzy Numbers Using Defuzzificators on OFN Shapes , Two Approaches to Fuzzy Implication.

**Unit – III Examples of Applications:** OFN Capital Budgeting Under Uncertainty and Risk, Input-Output Model Based on Ordered Fuzzy Numbers, Ordered Fuzzy Candlesticks, Detecting Nasdaq Composite Index Trends with OFNs, OFN Ant Method Based on TSP Ant Colony Optimization, A New OFNBee

**Unit – Examples of Applications (continued):** Method as an Example of Fuzzy Observance, Applied for ABC Optimization, Fuzzy Observation of DDoS Attack, Fuzzy Control for Secure TCP Transfer, Fuzzy Numbers Applied to a Heat Furnace Control, Analysis of Temporospatial, OFN-Based Brain Function Modeling.

**Text Books:**

 Professor and Head  
 Department of Mathematics  
 Dr. Babasaheb Ambedkar Marathwada University,  
 Chhatrapati Sambhajinagar-431004 (M.S.) INDIA

**Course Type: Major**

**Course Name: Linear Integral Equations**

**Course Code: SAD366504T**

**Contact Hours: 60 (4 per week)**

**Credits: 4**

**Marks: 100**

**Course Objective:** To know the techniques of solving various integral equations.

**Course Outcome:** The students will come to know various types of integral equations and techniques to solve them.

**Content:**

**Unit - I** Definition of Integral Equations and Linear Integral Equations, Types of Linear Integral Equations, Special kinds of Kernels: Separable or degenerate kernel, symmetric kernel, convolution-type kernels, Eigenvalues and Eigen functions of kernels, Solution of linear integral equations, Verification of solution of linear integral equations, Conversion of Boundary Value Problem to integral equations and vice-versa, conversion of Initial Value Problems to integral equations and vice-versa.

**Unit - II** Methods of obtaining solution for Fredholm integral equations, Fredholm integral equations with separable kernels, Approximating kernels by separable kernels, Method of successive approximation, Iterated kernel method for Fredholm integral equations, Resolvent kernels and their properties, Methods of solutions for Volterra integral equations, Volterra type kernel, Method of differentiation, Method of successive approximations, Method of iterative kernels, Resolvent kernels and its use to solve Volterra integral equations.

**Unit - III** Symmetric kernel, trace of a kernel, Fredholm operator, Fundamental properties of symmetric kernels, Eigen values and Eigen functions of symmetric kernel and their properties, normalized Eigen functions, Iterated kernel of symmetric kernels and their properties, Truncated kernel of symmetric kernel and necessary and sufficient condition for symmetric kernel to be separable, The Hilbert-Schmidt theorem, Method of Solution for Integral equations with symmetric kernels.

**Unit - IV** Integral Transform Methods, Recall of Laplace and Fourier Transforms, Application of Laplace transform to Volterra integral equations with convolution-type kernel and examples, Application of Fourier transform to some singular integral equations and examples.

**Text Book:** Linear Integral Equations Theory and Applications, R. P. Kanwal (Academic Press, 1971)

**Reference Books :**(1)Integral Equations, Shanti Swarup (Krishna Publication)

(2) Integral Equations and Boundary Value Problems, M. D. Raisinghanian( S. Chand &Company Pvt. Ltd. 2007)

  
Dr. Kirtiwan P. Ghosh  
Professor and Head  
Department of Mathematics,  
Dr. Babasaheb Ambedkar Marathwada University,  
Chhatrapati Sambhajnagar-431004 (M.S.) INDIA

**Course Type: Major**

**Contact Hours: 60 (4 per week)**

**Course Name: Mechanics**

**Credits: 4**

**Course Code: SAD366514T**

**Marks: 100**

**Course Objective:** To know Fundamentals of equation of motion, analysis of Lagrange's equation, Fundamentals and applications of Hamilton's equation, Fundamentals of calculus of variations.

**Course Outcomes:** Student will become familiar with equation of motions, Hamilton's equations and principle of least action and to handle to solve to extremals of the functional by using Euler's equation.

**Content:**

**Unit - I** Mechanics of system of particles, generalized coordinates, Holonomic & nonholonomic system, Scleronomic & Rheonomic system, D'Alembert's principle and Lagrange's equation of motion, different forms of Lagrange's equation, Generalized potential, conservative fields and its energy equation, Application of Lagrange's formulation.

**Unit - II** Functional, Linear functional, Fundamental lemma of Calculus of Variations simple variational problems, The variation of functional, the extremum of functional, necessary condition for extreme, Euler's equation, Euler's equation of several variables, invariance of Euler's equation, Motivating problems of calculus of variation, Shortest distance, Minimum surface of revolution, Brachistochrone Problem, Isoperimetric problem, Geodesic.

**Unit - III** The fixed end point problem for 'n' unknown functions, variational problems in parametric form, Generalization of Euler's equation to (i) 'n' dependent functions (ii) higher order derivatives. Variational problems with subsidiary conditions,

**Unit - IV** Hamilton's principle, Hamilton's canonical equations, Lagrange's equation from Hamilton's principle Extension of Hamilton's Principle to nonholonomic systems, Application of Hamilton's formulation (Hamiltonian) cyclic coordinates & conservation theorems, Routh's procedure, Hamilton's equations from variational principle, The principle of least action. Kepler's law of planetary motion.

**Text Books:** (1) 1. H. Goldstein, Charles Poole, John Safko: Classical Mechanics, Pearson 3<sup>rd</sup> Edition, 2002. Ch.. -1, Ch.. -2 (2.1 to 2.4), Ch.. (8.2-8.6) Ch. 4 (4.1 to 4.6)

(2) I. M. Gelfand & S. V. Fomin: Calculus of variations, prentice-Hall.

Professor and Head  
Department of Mathematics,  
Dr. Babasaheb Ambedkar Marathwada University,  
Chhatrapati Sambhajnagar-431004 (M.S.) INDIA

**Course Type: Major**

**Contact Hours: 60 (4 per week)**

**Course Name: Fuzzy Mathematics**

**Credits: 4**

**Course Code: SAD366524T**

**Marks: 100**

**Course Objective:** To introduce the theory of fuzzy sets as a measure of uncertainty and a ambiguity. Introduce the various operations on fuzzy sets and fuzzy Arithmetic operations.

**Course Outcome:** Student will become capable to distinguish between Classical and fuzzy approach of Mathematics

**Content:**

**Unit – I** From classical (crisp) sets to fuzzy sets; Introduction: crisp sets: An overview; Basic concepts in fuzzy sets; convex fuzzy sets (Theorems and exercises)

**Unit – II** Fuzzy sets versus crisp sets: Additional properties of  $\alpha$  - cuts; Representation of fuzzy sets; Decomposition Theorems. Operations on Fuzzy sets; Types of operations; Fuzzy complement (Axioms and theorems)

**Unit – III** Operations on Fuzzy Sets: Types of operations; Fuzzy Complements; Fuzzy intersections: t- norms; fuzzy unions: t – co norms; Combinations of operations; Aggregation of operations.

**Unit – IV** Fuzzy Arithmetic: fuzzy numbers; Linguistic Variables; Arithmetic operations on intervals of real numbers; Arithmetic operations on fuzzy numbers. Fuzzy relations: Introduction; fuzzy Relations; operations on fuzzy relations;  $\alpha$  - cuts of a fuzzy relation; composition of fuzzy Relations; fuzzy relation on a domain.

**Text Books:**

Professor and Head  
Department of Mathematics,  
Dr. Babasaheb Ambedkar Marathwada University,  
Chhatrapati Sambhajnagar-431004 (M.S.) INDIA

**Course Type: Elective**

**Course Name: Fluid Mechanics – II**

**Course Code: SBD366534T**

**Contact Hours: 60 (4 per week)**

**Credits: 4**

**Marks: 100**

**Course Objective:** To know: Fundamentals of viscous flow, stress and strain, Basics of viscosity and laminar flow, viscous incompressible fluid. Solvable Problems in viscous flow with heat transfer. Applications of flow.

**Course Outcome:** Student will become familiar with viscous flow, stress and strain, Navier Stock's equations, the energy equation and other aspects of fluid dynamics.

**Content:**

**Unit - I** Viscous flows, stress components in a real fluid, Relation between Cartesian components of stress, translations motion of a fluid element, rate of strain quadric and principal stresses, properties of the rate of strain quadric, [1].

**Unit - II** Stress Analysis in Fluid Motion, relation between stress and rate of strain, the coefficient of viscosity and laminar flow, the Navier Stock's equations, [1]: The energy equation, [2], [3], Equations in Cartesian, cylindrical or spherical polar coordinates for a viscous incompressible fluid: - Statements only without proof; [2] [3], Diffusion of velocity and dissipation of energy due to viscosity, [1].

**Unit - III** Some Solvable Problems in viscous flow with heat transfer: - Flow between parallel Plates velocity and temperature distribution [2], [3] steady flow through a tube of uniform circular cross section, Velocity and Temperature Distribution, [2], [3], Distribution, [2], steady flow between concentric rotating cylinders, velocity and temperature distribution, [2],[3], Flow in tubes of arbitrary but uniform cross section, equations for velocity and Temperature in a steady flow, [1], [2], [3] Uniqueness Theorem for the velocity and Temperature, [1], Velocity distribution for tubes having equilateral triangular or elliptic cross section, [1] Velocity distribution for the flow through a tube of rectangular cross section [2], [3].

**Unit - IV** Flow between two porous Plates, plane Couett of plane poisseuille flow – velocity and temperature distribution, [2], Flow through a convergent or divergent channel, [2], [3], Flow of two immiscible fluids between parallel Plates, [2], Flow due to a Plane wall suddenly set in motion or due to an oscillating plane wall, [3].

**Course Name: Operations Research – II**

**Credits: 4**

**Course Code: SBD366544T**

**Marks: 100**

**Course Objective:** To know: Fundamentals of Dynamic programming, Nonlinear Programming, Replacement problems Network scheduling and PERT CPM.

**Course Outcome:** To become familiar with Dynamic Programming, nonlinear Programming and to find out Shortest Path and Critical Path for given problem

**Content:**

**Unit – I** Dynamic programming, computational procedure, solution of LPP by dynamic programming.

**Unit – II** Nonlinear Programming introduction, general nonlinear programming problems, problem of constrained maxima and minima, graphical solution Kuhn-Tucker conditions, Quadratic programming. Integer programming

**Unit – III** Replacement problems, Applications to industrial problems.

**Unit – IV** Network scheduling and PERT- CPM.

**Course Type: Elective**

**Contact Hours: 60 (4 per week)**

**Course Name: Fractional Calculus**

**Credits: 4**

**Course Code: SBD366554T**

**Marks: 100**

**Course Objective:** To introduce fractional calculus, fractional differential equations and methods of solutions

**Course Outcome:** To become familiar fractional calculus, fractional differential equations and methods of solutions

**Content:**

**Unit 1:-** Fractional Derivatives and Integrals: Grunwald\_Letnikov Fractional Derivatives, Riemann-Liouville Fractional Derivatives, Caputo's Fractional Derivatives, Sequential Fractional Derivatives, Left and Right Fractional Derivatives, Properties of Fractional Derivatives,

**Unit 2:-** Laplace transform of Fractional Derivatives, Fourier Transform of Fractional Derivatives, Mellin Transform of Fractional Derivatives.

**Unit 3:-** Existence And Uniqueness Theorems: Linear Fractional Differential Equations, General form of Fractional Differential Equations, Method of solutions, Dependence on initial conditions.

**Unit 4:-** The Laplace Transform Method: Standard Fractional Differential Equations, Sequential Fractional Differential Equations.

**Course Type: Elective**  
**Course Name: Fuzzy Logic And Neural Network**  
**Course Code: SBD366574T**

**Contact Hours: 60 (4 per week)**  
**Credits: 4**

**Marks: 100**

**Course Objective:** To master the various fundamental concepts of fuzzy logic and artificial neural networks. This will help you to get sufficient knowledge to analyze and design the various intelligent control systems

**Course Outcome:** Student will become capable to basic concept of crisp sets and fuzzy sets, basic, competitive neural networks

**Content:**

**UNIT I Fundamentals of fuzzy logic:** Basic concepts: fuzzy set theory- basic concept of crisp sets and fuzzy sets- complements- union-intersection- combination of operation- general aggregation operations- fuzzy relations-compatibility relations-orderings-morphisms-fuzzy relational equations-fuzzy set and systems

**UNIT II Architecture of neural networks:**

Architectures: motivation for the development of natural networks-artificial neural networks- biological neural networks-area of applications-typical Architecture-setting weights-common activations functions-Basic learning rules- McCulloch-Pitts neuron- Architecture, algorithm, applications-single layer net for pattern classification- Biases and thresholds, linear separability - Hebb's rule- algorithm -perceptron -Convergence theorem-Delta rule

**UNIT III Basic Neural Network Techniques:**

Back propagation neural net: standard back propagation-architecture algorithm- derivation of learning rules-number of hidden layers--associative and other neural networks- hetero associative memory neural net, auto associative net- Bidirectional associative memory-applications-Hopfield nets-Boltzman machine

**UNIT IV Competitive Neural Networks:**

Neural network based on competition: fixed weight competitive nets- Kohonenself organizing maps and applications-learning vector quantization-counter propagation nets and applications adaptive resonance theory: basic architecture and operation-architecture, algorithm, application and analysis of ART1 & RT2 Cognitron and Neocognitron - Architecture, training algorithm and application-fuzzy associate memories.fuzzy system architecture- comparison of fuzzy and neural systems.
